

Gen Z and Millennial college students today expect a seamless digital experience—one that mirrors the digital world they've grown up in.

But for most institutions of higher learning, creating that seamless experience requires integrating multiple different platforms, which often means investing in costly, clumsy, and hard-to-implement custom integration tools.

That's where the N2N Illuminate platform and its partnership with data management and integration tool Boomi comes in. Boomi, a Dell Technologies business, connects everyone to everything—without the need for lots of custom coding.

Through this partnership, N2N customers will be able to access Boomi features embedded directly within the Illuminate platform. This means that customers will be able to leverage integrated Illuminate APIs with additional data sources, thanks to Boomi's advanced development tools.

Their easy-to-use, low-code system within N2N Illuminate accelerates and simplifies discovery, organization, and management of your organization's data, thereby making it actionable across the university. This allows you to serve your students better, keep them safer, deliver better guidance, and improve the overall student experience.

Here's how N2N and Boomi can help you solve three of the biggest system integration challenges institutions of higher education face.

N2N Services Inc. • illuminateapp.com • 888-651-3309 • info@n2nservices.com

PROBLEM #1

All stakeholders—students, parents, teachers, staff, and administrators— expect perpetually available, on-demand access to all systems and processes regarding their interaction with the institution. This includes everything from getting a student's grades, to signing up for a meal plan, to accessing campus buildings.

Consider what these interactions require: a robust Electronic Data Interchange (EDI) solution that calls into various systems, generates user experience (UX) that can be consumed on various devices, is secure, and can both support legacy systems, and incorporate emerging technologies.

That's a tall order, and the only way to deliver this seamless, on-demand experience is to be able to fully integrate multiple different systems, APIs, and platforms.

Integrating the Boomi Platform with the N2N Illuminate Platform means that N2N clients will have complete end-to-end visibility into Illuminate connectors and process flows, as well as detailed performance metrics. N2N can also provide additional connectors and advanced development options to customers.
