

A Partnership Enabling Custom,
Branded University and College Apps

Today's higher education students are a mobile-first generation.

From their personal finances, to their social calendars, students are seamlessly managing almost every aspect of their lives using their devices—but often, once they enroll in their college or university, they find themselves having to visit multiple websites, go through tedious registration processes, or even resort to analog methods altogether.

Yet, colleges and universities can offer the same kind of mobile ease-of-use that students are used to in other arenas of their lives. They just need the right tools.

This is where N2N Illuminate's partnership with Modo Labs comes in. Illuminate, N2N's Integration Cloud platform, and Modo Labs, an app assembly system, allow higher education institutions to connect their many disparate data sets and integrate them into a

solution that not only allows students to connect to their financial data, course work, grades, academic resources, and housing, but also empowers them by giving them the ability to interact with their teachers, advisors, and tutors, and connect to all their campus activities.

Here's how the partnership with Modo Labs can help your institution of higher learning.

Build Custom College and University Apps

—With No Coding Required

Colleges and universities need to be able to communicate with students regularly, quickly, and in an automated fashion in order to stay relevant in today's intensely interconnected and fast-moving ecosystem.

The problem is that these institutions are generally left with just two choices: use a generic app, which offers very few options for branding or customizing, or hire an expensive developer to create a custom app from scratch.

With Modo Labs' Kurogo Platform, however, non-developers for the first time can access powerful mobile implementation and deployment capabilities that were previously only attainable by hiring mobile developers or consultants.

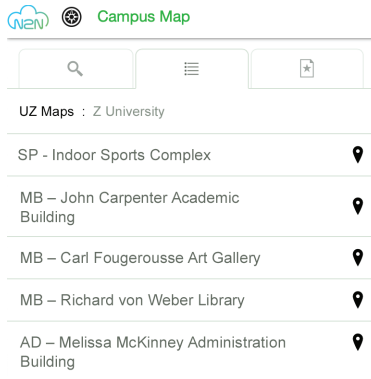

At the heart of Kurogo is a Mobile-Optimized Middleware™ server that accesses and quickly combines and transforms any data source or dynamic feed, such as maps, social media, news, videos, transit, LMS, and more, into a rich and curated mobile experience.

In addition, Kurogo empowers non-technical staff or business owners to create and further enhance native mobile apps with a modern and sophisticated user experience, and include special purpose modules for conference events, new student or employee orientation, commencement, career fairs, or any other aspect of campus life. Kurogo's unique combination of data access, powerful pre-built functionality, and ease-of-use, dramatically reduces mobile development time and costs.

The combination of the two platforms dramatically simplifies the mobile app building process even further. The broad range of disparate data sources faced by most universities can be easily integrated and accessed through N2N's powerful Illuminate data engine, and in turn, quickly mobilized into a rich mobile experience through the Kurogo mobile app assembly platform and Modo Campus®.

Deliver a Unified Hub of Crucial Information

Bringing together all of your existing systems into one mobile ecosystem through 100+ data-connectors, Mod Campus® centralizes your digital strategy rather than simply adding to the pack.

Communicate in Real-Time

From individualized or role-based messaging, to opt-in channels and emergency communications, ensure everyone on campus is getting communications when they are most relevant.

Modo Marketplace

Centralize student commercial activities by offering fully integrated and secure storefronts within the campus app they already use and trust. Buy a bike from a new friend, register for a university-sponsored 5K, pay club membership fees, or sell textbooks back to the campus bookstore.

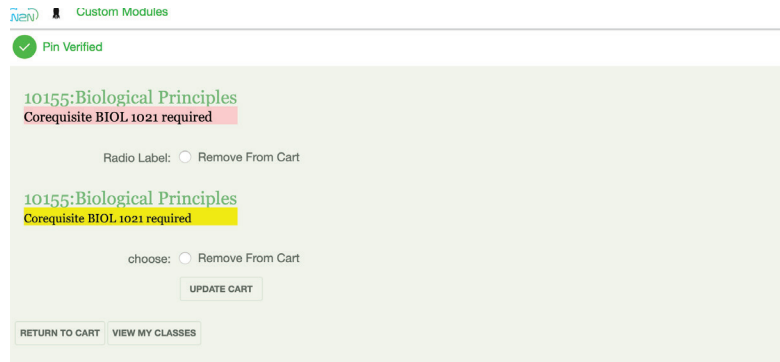

Personalize Engaging Student Experiences

Centralize student commercial activities by offering fully integrated and secure storefronts within the campus app they already use and trust. Buy a bike from a new friend, register for a university-sponsored 5K, pay club membership fees, or sell textbooks back to the campus bookstore.

Accelerate App Creation and Iteration

The no-code platform allows you to build quickly, deploy once across native apps and multi-platform web, and deliver increased features, functionality, and value over time.

Bring Your Student Communications Into the 21st Century

The mobile-first, digital ecosystem that we're all living in today calls for a digital- and mobile-first approach—including for universities and colleges.

With N2N Illuminate and Modo Labs, educational institutions can offer the comprehensive mobile experience that students expect. From registering for classes, to paying dues to a campus club, this partnership allows students to make direct transactions and communicate with their schools via their mobile devices—just like they do with their friends, their banks, the retailers they patronize, and more.
